利用radio傳送數據至wifi:bit再上傳至 thingspeak

wifi:bit 的定位為簡單IoT extension board 供電較弱亦不設易接駁的Pins(腳位), 因而在收集數據 和輸出(Output)略受限制,為了解決以上問題可以多用一隻micro:bit 收集數據並至radio形式傳送 數據至wifi:bit再透過互聯網上傳到Thingspeak等的雲端。

所需材料:

micro:bit x 2

wifi:bit x 1

Sensor + extension board x 1 (如需要)

🦷 這次我們先以簡單的 micro:bit light level 作示範

編程教學:

micro:bit A (發送數據):

編程概覽:

on start			on button A 🔹 pressed
radio set group	1		show number light level
			radio send number light level
			+ +

♀ 在傳接訊號時,兩者都需在同一個 radio group上。

使用radio set group 1 將 radio group 設成 1, micro:bit B 亦需這樣做。

♀ 在 On start 時加入 radio group 的原因是這能確保接下來的所有編程都能以radio 傳接。

on button A 🔻 pressed 🖡 🕌	
show number light level	+ ·
radio send number light level	+ ·
+ +	

♀ 利用「On Button A pressed」的目的是給予一個 Input 用家決定何時傳送 light level 數據

show number 目的是顯示當前所收集的數據,亦能確保數據有傳送出去!

由於這次要傳送的是數據所以需使用「radio send number」, light level 則是需傳送出去的數據 (number), light level 可在「Input」中找到。

micro:bit B(wifi:bit) 上傳數據:

是次教學只會注重在接收radio訊號及上傳數據的編程上;
 關於如何設置 ThingSpeak 可看: ThingSpeak使用教學(wifibit ver.)

連接至互聯網:

相信連接互網聯的編程大家都不陌生了,唯一不同的地方是加入「radio set group 1」, 目的前跟micro:bit A 建立同一個 radio group 以接收/傳送訊號。

接收radio數據並上傳至ThingSpeak編程:

② 利用 on radio received receivedNumber 來接收micro:bit A 發傳的數據(light level)

n radio re	ceived r	eceivedNum	ber									
clear scr	en	+ +										
execute H	TP method	i Get 🔻										
host: 'a	oi.things	peak.com"										
port: 80)											
port: 80 path: jo	in "/upd	ate?api_ke	y=UPRZ2	5NKA6YB	9X26&	field	1="	rece	ivedN	umber	0	•
port: 80 path: jo	in "/upd	ate?api_ke	y=UPRZ2	5NKA6YB	9X26&	field	1="	rece	ivedN	umber	Θ	•
port: 80 path: jo show icon	in "/upd	ate?api_ke	y=UPRZ2	5NKA6YB	9X26&	field	1="	rece	ivedN	umber		•
port: 80 path: jo show icon	in ("/upd	ate?api_ke	y=UPRZ2	5NKA6YB 在 АРІ	19X26&	field: 複製	1= "	rece	ivedN +	umber +		•

receivedNumber 是從micro:bit A 發傳的number(light level) 輸入api.thingspeak.com (上傳data至thingspeak server), port 保持80不變 receivedNumber 是從micro:bit A 發傳的number(light level)

把「/update field1= 」複製並貼上到「join」後, join可在「Text」中找到 注意:不需要copy field1 = 後的「0」, update 前的「/」請記緊複製

♀ show icon 「♥」作用是表示數據有成功上傳!

API KEYS 部份:

Private View Pul	blic View Channel Settings	Sharing API Keys Data Import / Export
Write API I	Key	Help
Key	UPRZ25NKA6YB9X26	API keys enable you to write data to a channel or read data from a private channel. API keys are auto-generated when you create a new channel. API Keys Settings
	Generate New Write API Key	 Write API Key: Use this key to write data to a channel. If you feel your key has been compromised, click Generate New Write API Key. Read API Keys: Use this key to allow other people to view your private channel feeds and charts. Click Generate New Read API Key to generate an additional read key for the channel.
Read API k	Keys	Note: Use this field to enter information about channel read keys. For example, add notes to keep track of users with access to your channel.
Key	4ZYBAYTXTGCXYDZG	API Requests
Note		Write a Channel Feed <pre>https://api.thingspeak.com/update?api_key=UPRZ25NKA6YB9X26&field10 </pre>

整個編程:

						on radio received receivedNumber
+ + + +						clear screen
on start						execute HTTP method GET 🗢
connect to WiFi:bit	+	+	-	+	+	host: "api.thingspeak.com"
connect to WiFi net	work	"ssid	• •	"pas	sward "	port: 80
radio set group 1						path: join ("/update?api_key=UPRZ25NKA6YB9X26&field1=" receivedNumber 🔾 🕣
show icon						•
show icon						Show icon

ThingSpeak 上查看數據:

按下「Private View」便能查看已上傳的數據
